Creating an s3 bucket:

The screenshot shows a VS Code editor with a Terraform project. The Explorer on the left shows the file structure for 'Day-2', with 'main.tf' selected. The main editor displays the Terraform configuration for an S3 bucket:

```
1 resource "aws_s3_bucket" "example" {
2   bucket = "my-tf-test-bucket-2105"
3
4   tags = {
5     Name      = "My bucket"
6     Environment = "Dev"
7   }
8 }
```

The terminal at the bottom shows the execution of the Terraform apply command:

```
hp@Dharanidhar MINGW64 ~/gitrepos/Terraform/Day-2
$ terraform apply
Only 'yes' will be accepted to approve.

Enter a value: yes

aws_s3_bucket.example: Creating...
aws_s3_bucket.example: Creation complete after 2s [id=my-tf-test-bucket-2105]

Apply complete! Resources: 1 added, 0 changed, 0 destroyed.

hp@Dharanidhar MINGW64 ~/gitrepos/Terraform/Day-2
$
```

S3 bucket is created below:

The screenshot shows the Amazon S3 console. The left sidebar shows the navigation menu with 'Buckets' selected. The main content area shows the 'Buckets' page for 'General purpose buckets'. A table lists the created bucket:

Name	AWS Region	Creation date
my-tf-test-bucket-2105	Asia Pacific (Hyderabad) ap-south-2	June 28, 2026, 23:35:34 (UTC+05:30)

S3 bucket is deleted :
