

```
PS C:\Users\jagad\OneDrive\Desktop\DevOps demo files\terraform project\project-2\environments\dev> terraform init
```

Initializing provider plugins found in the state...

Warning: Deprecated Parameter

The parameter "dynamodb_table" is deprecated. Use parameter "use_lockfile" instead.

Terraform has been successfully initialized!

You may now begin working with Terraform. Try running "terraform plan" to see any changes that are required for your infrastructure. All Terraform commands should now work.

If you ever set or change modules or backend configuration for Terraform, rerun this command to reinitialize your working directory. If you forget, other commands will detect it and remind you to do so if necessary.

```
PS C:\Users\jagad\OneDrive\Desktop\DevOps demo files\terraform project\project-2\environments\dev>
```

- PS C:\Users\jagad\OneDrive\Desktop\DevOps demo files\terraform project\project-2\environments\dev> terraform validate
Success! The configuration is valid.
- PS C:\Users\jagad\OneDrive\Desktop\DevOps demo files\terraform project\project-2\environments\dev> █

```
PS C:\Users\jagad\OneDrive\Desktop\DevOps demo files\terraform project\project-2\environments\dev> terraform plan -var-file="dev.tfvars"
```

Terraform will perform the following actions:

module.ec2.aws_instance.this[0] will be created

```
+ resource "aws_instance" "this" {
  + ami                = "ami-0f7406a708a43024c"
  + arn                = (known after apply)
  + associate_public_ip_address = true
  + availability_zone   = (known after apply)
  + cpu_core_count      = (known after apply)
  + cpu_threads_per_core = (known after apply)
  + disable_api_stop     = (known after apply)
  + disable_api_termination = (known after apply)
  + ebs_optimized        = (known after apply)
  + enable_primary_ipv6  = (known after apply)
  + get_password_data    = false
  + host_id              = (known after apply)
  + host_resource_group_arn = (known after apply)
  + iam_instance_profile  = (known after apply)
```

```
PS C:\Users\jagad\OneDrive\Desktop\DevOps demo files\terraform project\project-2\environments\dev> terraform plan -var-file="dev.tfvars"
```

```
+ (known after apply),
]
+ public_ips          = [
+   (known after apply),
+ ]
+ public_subnet_ids   = [
+   (known after apply),
+   (known after apply),
+ ]
+ security_group_id   = (known after apply)
+ vpc_id              = (known after apply)
+ website_url         = [
+   (known after apply),
+ ]
```

Note: You didn't use the -out option to save this plan, so Terraform can't guarantee to take exactly these actions if you run "terraform apply" now.

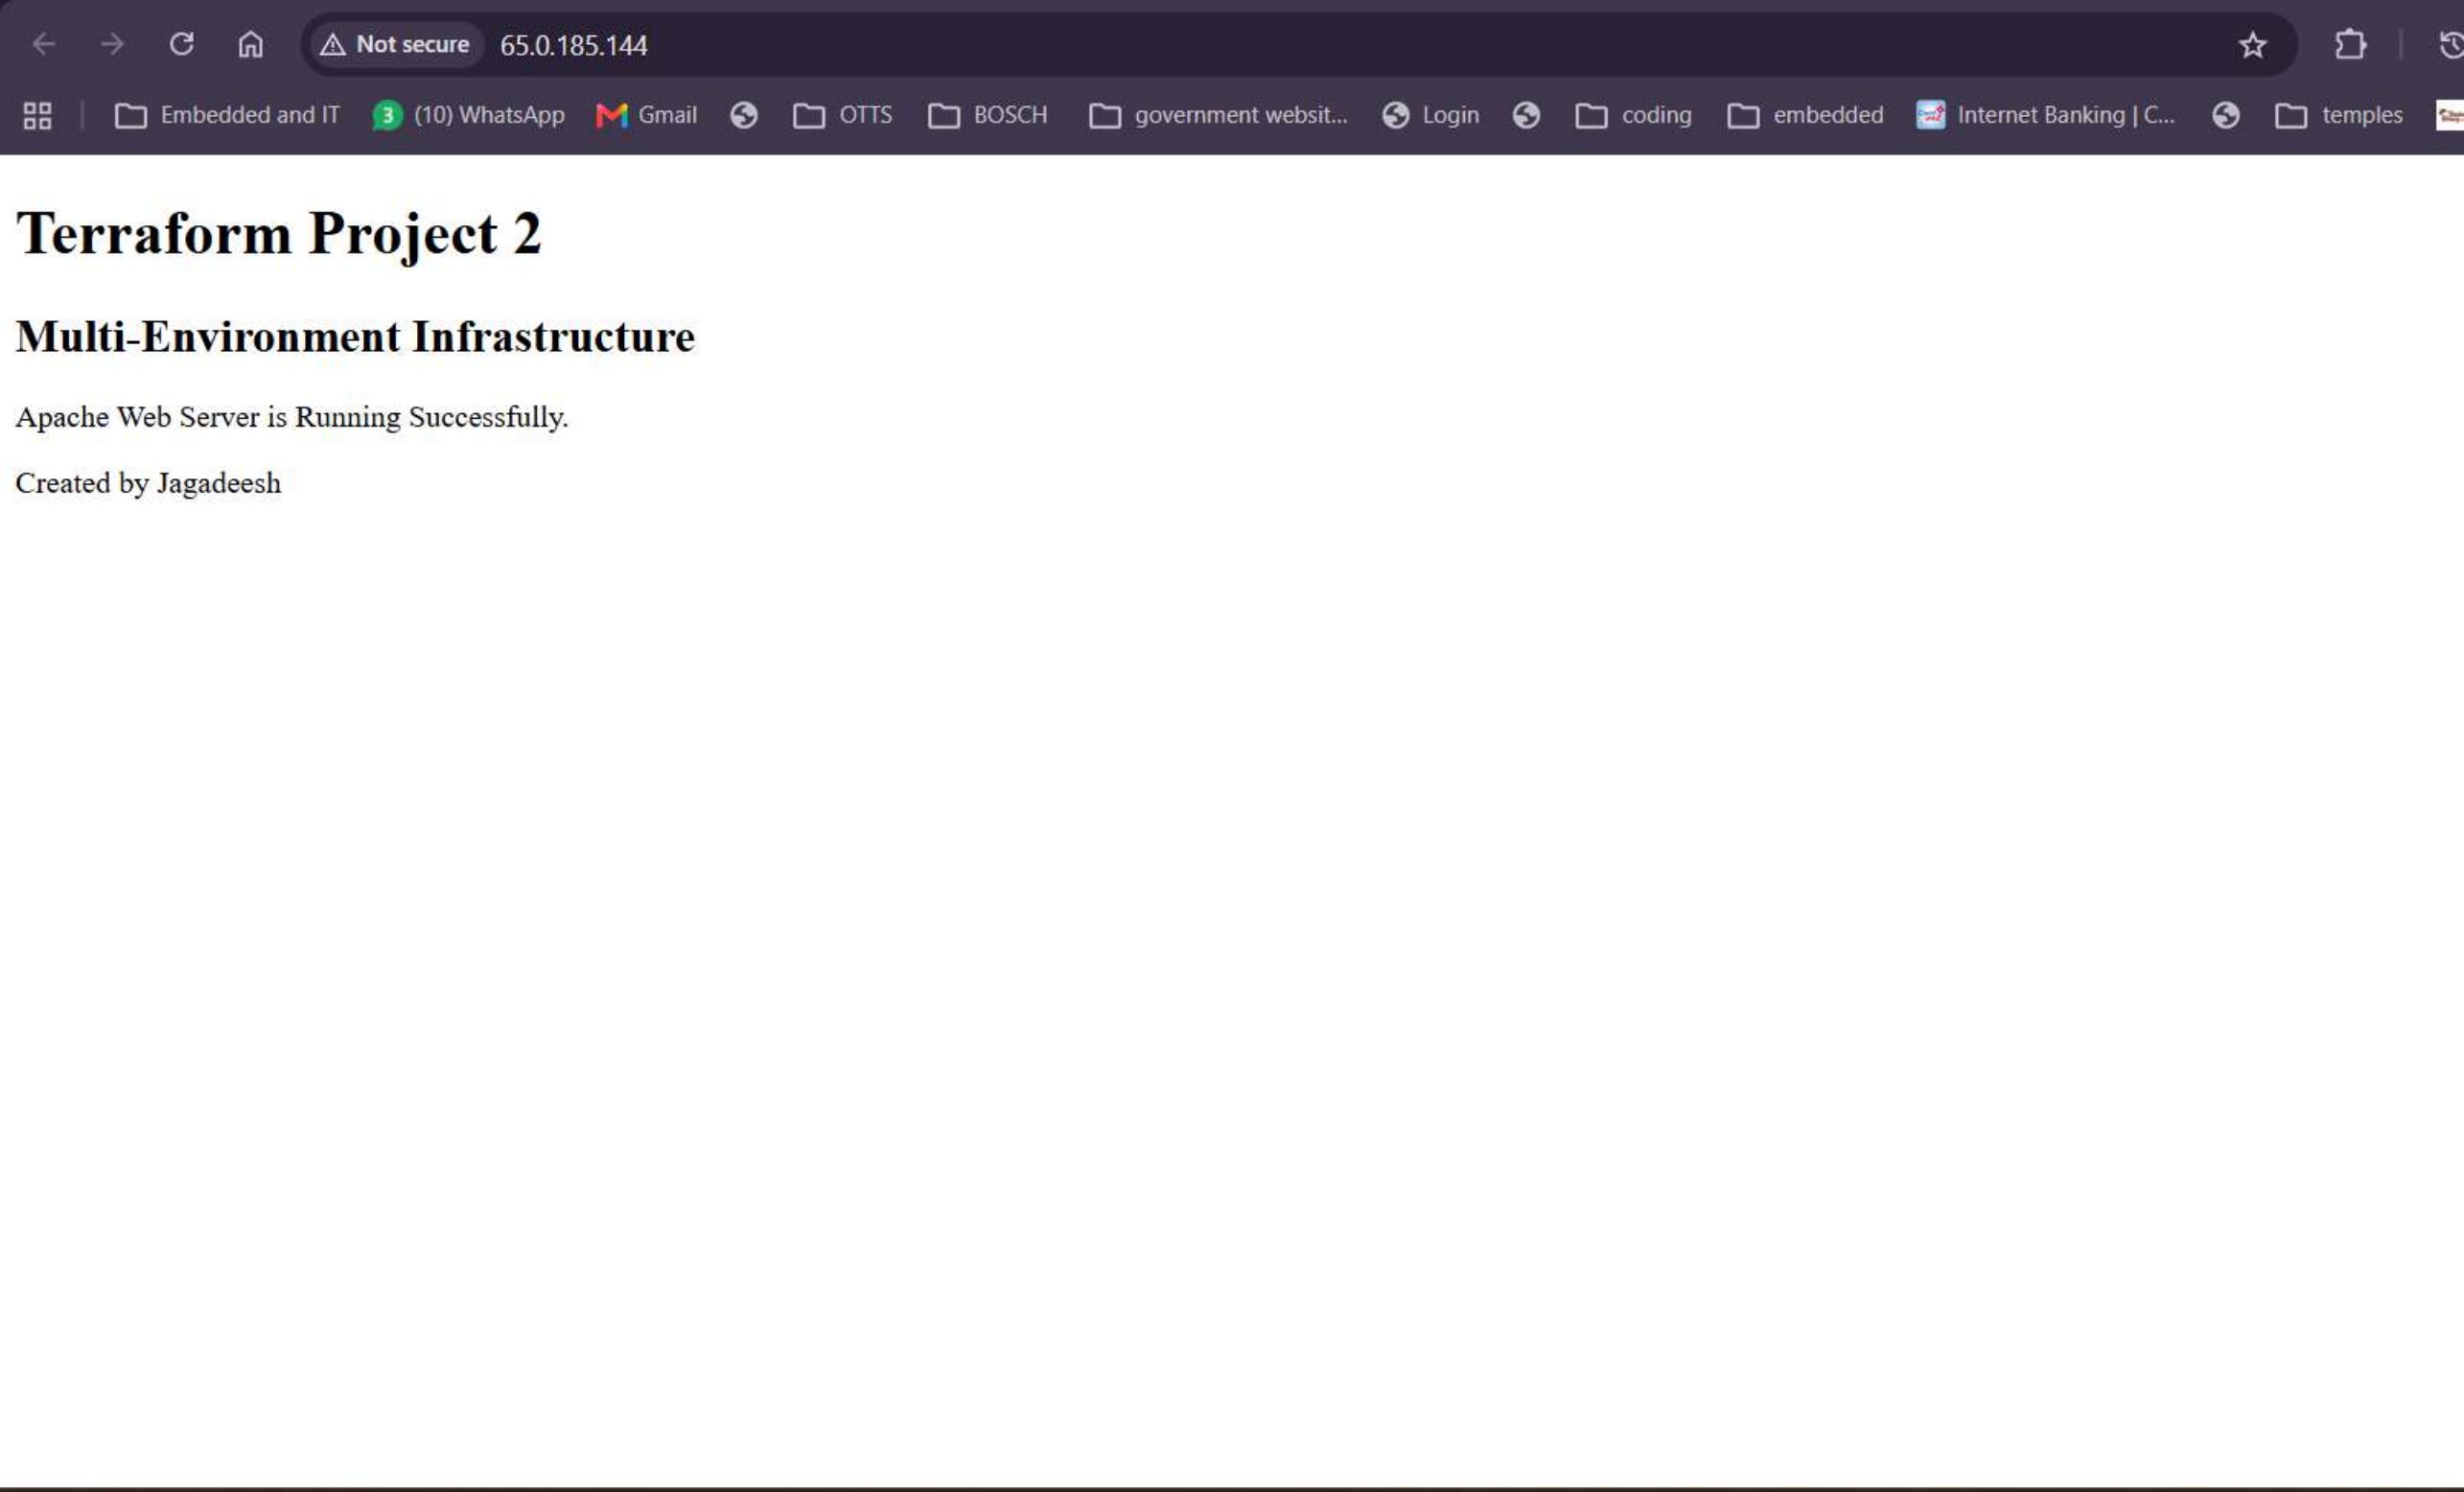

```
PS C:\Users\jagad\OneDrive\Desktop\DevOps demo files\terraform project\project-2\environments\dev>
```

```
PS C:\Users\jagad\OneDrive\Desktop\DevOps demo files\terraform project\project-2\environments\dev> terraform apply -var-file="dev.tfvars"
```

Outputs:

```
aws_region = "ap-south-1"
environment = "dev"
instance_ids = [
    "i-0662743eabc1a3841",
]
private_subnet_ids = [
    "subnet-04f93efee6feaa679",
    "subnet-0e390a62ea5ee77f0",
]
public_ips = [
    "65.0.185.144",
]
public_subnet_ids = [
    "subnet-002bb57de5104b0dd",
    "subnet-04abbea8390550280",
]
```

```
]
security_group_id = "sg-0e53f891638beb9f4"
vpc_id = "vpc-0dcb74239ec6eb5cd"
website_url = [
    "http://65.0.185.144",
]
○ PS C:\Users\jagad\OneDrive\Desktop\DevOps demo files\terraform project\project-2\environments\dev> 
```

Objects are the fundamental entities stored in Amazon S3. You can use [Amazon S3 inventory](#) to get a list of all objects in your bucket. For others to access your objects, you'll need to explicitly grant them permissions. [Learn more](#)
